Announcements and reminders

- Unanswered questions from last week's lecture are answered on Canvas in the Discussions section.

- Both exams will be open-book, meaning you may bring one sheet of paper (handwritten or printed, A4 or smaller, double-sided). You won't have access to the internet or files saved on your laptop.

- **Midterm: Friday, 6 March (Week 7), 2pm-3:30pm, MPSH 1A & 1B, NOT LT11**

  (I'll let you know which venue applies to which of you next week.)

  Relevant materials: **Weeks 2-5 lectures and readings** (Week 6 will be covered by the final).

  Some exam questions may require knowledge from the readings that isn't covered in class.

  We'll use Examplify (you should bring your own laptop—let me know if you can't).

  You must be physically present at the venue.

  Fully charge your laptop before the exam, if possible (the number of charging stations is limited)

  If you think you'll need a charger, bring your own charger.

- Reminder: There will be an in-class briefing about how to use Examplify during next week's lecture.

Attempts: 271 out of 278

I prefer the MIDTERM exam to be...

Closed book: You are not allowed to consult any materials.	131 respondents	**47 %**
Open book: You may bring one sheet of paper (handwritten or printed, A4 or smaller, double-sided).	140 respondents	50 %
No Answer	7 respondents	3 %

Attempts: 269 out of 278

I prefer the FINAL exam to be...

Closed book: You are not allowed to consult any materials.	119 respondents	**43 %**
Open book: You may bring one sheet of paper (handwritten or printed, A4 or smaller, double-sided).	150 respondents	54 %
No Answer	9 respondents	3 %

There were two things that I postponed discussing.

Singer's argument as to why we ought to donate a significant amount of our money to international aid agencies.

Roughly put, reason why we should accept a certain claim

(a more precise definition will be provided later)

What makes an action morally right or wrong?

Are there objective truths about morality?

We'll talk about these two things today.

First, arguments.

More specifically, **what a good argument is**.

This content will probably be the most difficult

(and possibly the most important) thing you'll learn in this course.

It is perfectly normal to find this difficult.

E.g.)

Premises

All humans are mortal.

Socrates is a human.

Conclusion → Therefore, Socrates is mortal.

This argument provides a reason why we should accept that Socrates is mortal.

The idea is that (assuming that the argument is well constructed) if you accept the premises, you must, rationally speaking, accept the conclusion as well.

What is an argument (in philosophy)?

A series of statements where the last statement (conclusion) is supposedly supported by the other statements (premises).

E.g.)

Premises

All humans are mortal. ← Premise1

Socrates is a human. ← Premise2

Conclusion → Therefore, Socrates is mortal.

An argument = premises + a conclusion

support

This support comes in degrees, depending on the type of argument.

When it comes to some types of arguments, the premises are supposed to make the truth of the conclusion likely without guaranteeing its truth.

E.g.) P1. The sun has risen every single day until now.

C. The sun will rise tomorrow.

An argument = premises + a conclusion

support

This support comes in degrees, depending on the type of argument.

When it comes to another type of arguments called deduction,

the premises are supposed to guarantee the truth of the conclusion.

E.g.) P1. All humans are mortal.

P2. Socrates is a human.

C. Therefore, Socrates is mortal.

From now on, we'll talk about deductive arguments only.

Nothing super important so far.

What we'll discuss next is very important.

What is a good deductive argument?

What is required for a deductive argument to be successful?

I’m not sure if my crush is interested in me…

They are interested in you! Here’s an argument.

P1. Your crush blushes when they see you.

P2. If your crush blushes when they see you, they are interested in you.

C. Therefore, they are interested in you.

I'm not sure if my crush is interested in me…

They are interested in you! Here's an argument.

P1. Your crush blushes when they see you.

P2. If your crush blushes when they see you, they are interested in you.

C. Therefore, they are interested in you.

Is this argument good? That is, should you accept the conclusion based on this argument? To answer this, you need to think about two things.

1. Premises themselves: Is each of the premises true?

But meeting this condition is not enough.

E.g.,) P1. Your crush is taking Life, the Universe, and Everything. (True)

P2. Peter Singer is a utilitarian. (True)

C. Therefore, your crush is interested in you.

I'm not sure if my crush is interested in me…

They are interested in you! Here's an argument.

P1. Your crush blushes when they see you.

P2. If your crush blushes when they see you, they are interested in you.

C. Therefore, they are interested in you.

Is this argument good? That is, should you accept the conclusion based on this argument? To answer this, you need to think about two things.

1. Premises themselves: Is each of the premises true?
2. The relation between the premises and the conclusion: Are the premises and the conclusion related to each other in the right way, which means that the premises, *if true*, guarantee the truth of the conclusion?

If Condition 2 is met, the argument is **valid**.

If both conditions are met, the argument is **sound.**

- A **sound** argument is a **valid** argument whose **premises are all true.**

  Soundness = (1) validity + (2) all premises being true.

  Both conditions need to be met for an argument to be sound.

- A **valid** argument:

  Its premises and conclusion are connected in such a way that…

  if the premises are all true, the conclusion must be true as well.

  In other words, the conclusion follows from the premises.

  The premises, if all true, 100% guarantee the truth of the conclusion.

  (It doesn't matter whether the premises are actually true.)

  How to check whether an argument is valid:

  Assume that all the premises are true and think about whether it is possible for the conclusion to be false.

  If yes, invalid. If no, valid.

  E.g.) P1. All philosophers are men.

  P2. Jungkook is a philosopher. Valid or invalid?

  C. Jungkook is a man.

- A **sound** argument is a **valid** argument whose **premises are all true.**

  Soundness = (1) validity + (2) all premises being true.

  Both conditions need to be met for an argument to be sound.

- A **valid** argument:

  Its premises and conclusion are connected in such a way that…

  if the premises are all true, the conclusion must be true as well.

  In other words, the conclusion follows from the premises.

  The premises, if all true, 100% guarantee the truth of the conclusion.

  (It doesn't matter whether the premises are actually true.)

  How to check whether an argument is valid:

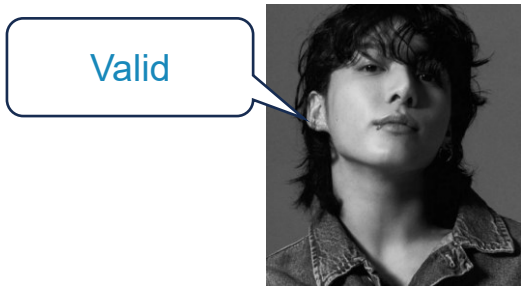
  Assume that all the premises are true and think about whether it is possible for the conclusion to be false.

  If yes, invalid. If no, valid.

  E.g.) P1. All philosophers are men.

  P2. Jungkook is a philosopher. Valid or invalid?

  C. Jungkook is a man.



- A **sound** argument is a **valid** argument whose **premises are all true.**

  Soundness = (1) validity + (2) all premises being true.

  Both conditions need to be met for an argument to be sound.

- A **valid** argument:

  Its premises and conclusion are connected in such a way that…

  if the premises are all true, the conclusion must be true as well.

  In other words, the conclusion follows from the premises.

  The premises, if all true, 100% guarantee the truth of the conclusion.

  (It doesn't matter whether the premises are actually true.)

  How to check whether an argument is valid:

  Assume that all the premises are true and think about whether it is possible for the conclusion to be false.

  If yes, invalid. If no, valid.

  E.g.) P1. All philosophers are men.

  P2. Jungkook is a philosopher. Sound or unsound?

  C. Jungkook is a man.

- A **sound** argument is a **valid** argument whose **premises are all true.**

  Soundness = (1) validity + (2) all premises being true.

  Both conditions need to be met for an argument to be sound.

- A **valid** argument:

  Its premises and conclusion are connected in such a way that…

  if the premises are all true, the conclusion must be true as well.

  In other words, the conclusion follows from the premises.

  The premises, if all true, 100% guarantee the truth of the conclusion.

  (It doesn't matter whether the premises are actually true.)

  How to check whether an argument is valid:

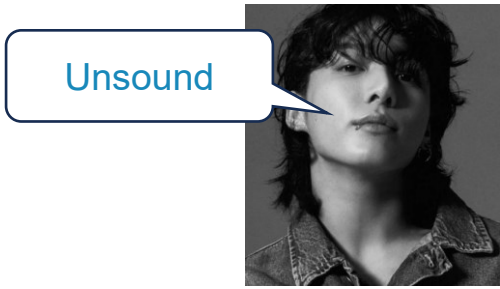
  Assume that all the premises are true and think about whether it is possible for the conclusion to be false.

  If yes, invalid. If no, valid.

  E.g.) P1. All philosophers are men.

  P2. Jungkook is a philosopher. Sound or unsound?

  C. Jungkook is a man.



A sound argument is a good argument because..

if an argument is sound, its conclusion must be true.

Is there an easy way to tell whether an argument is valid or not?

Four common valid and invalid argument forms

First, two common **valid** argument forms

Always valid argument form 1

P1. If A, then B (= B, if A)

P2. A

C. B

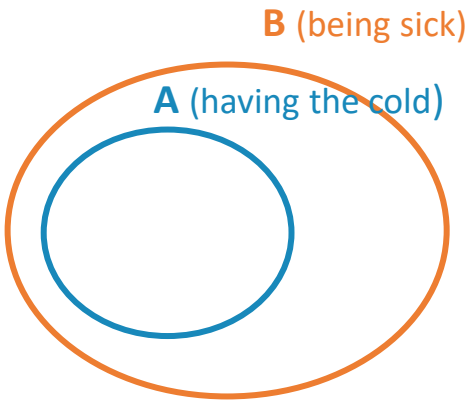
P1. If I have the cold, then I am sick.

P2. I have the cold.

C. I am sick.

It doesn't matter for validity which premise is P1 and which premise is P2

Always valid argument form 1



P1. If A, then B (= B, if A)

P2. A

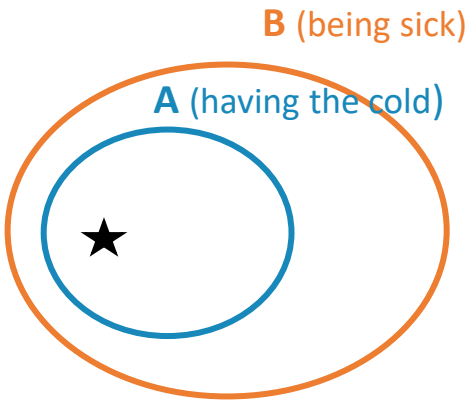
C. B

P1. If I have the cold, then I am sick.

P2. I have the cold.

C. I am sick.

Always valid argument form 1



P1. If A, then B (= B, if A)

P2. A

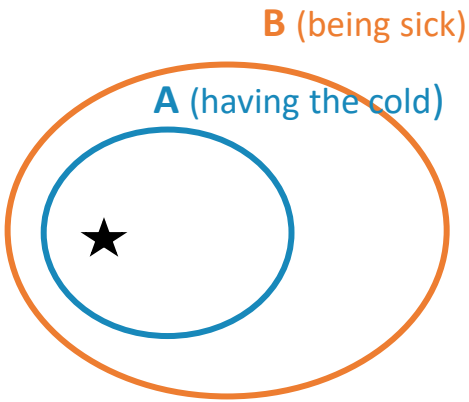
C. B

P1. If I have the cold, then I am sick.

P2. I have the cold.

C. I am sick.

Always valid argument form 1



P1. If A, then B (= B, if A)

P2. A

C. B

P1. If I have the cold, then I am sick.

P2. I have the cold.

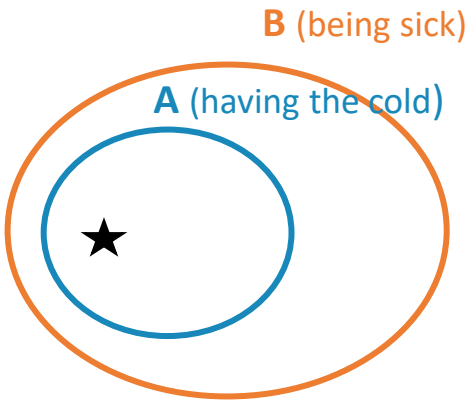
C. I am sick.

Always valid argument form 1

P1. If A, then B (= B, if A)

P2. A

C. B



P1. If I have the cold, then I am sick.

P2. I have the cold.

C. I am sick.

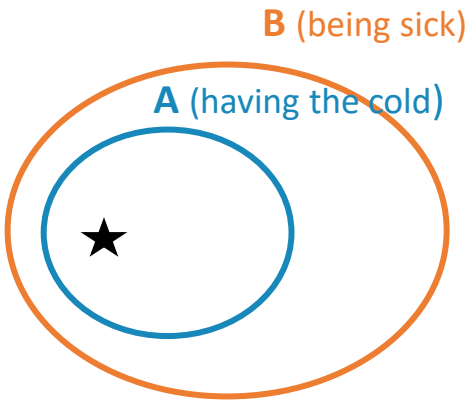
P1. If your crush blushes when they see you, they are interested in you.

P2. Your crush blushes when they see you.

C. Therefore, they are interested in you.

Valid!
If the premises are true, it must be the case that my crush is interested in me!

Always valid argument form 1



P1. If A, then B (= B, if A)

P2. A

C. B

P1. If I have the cold, then I am sick.

P2. I have the cold.

C. I am sick.

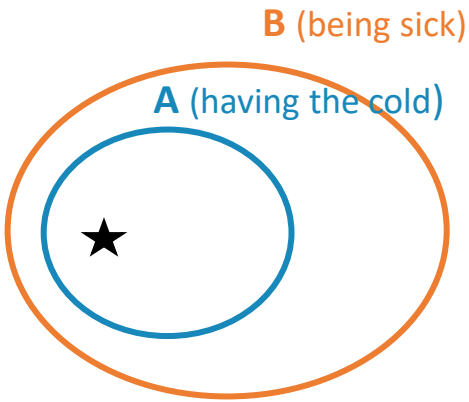
P1. If we ought to save the drowning child, Taylor Swift is a philosopher.

P2. We ought to save the drowning child.

C. Therefore, Taylor Swift is a philosopher.

Valid or invalid?

Always valid argument form 1



P1. If A, then B (= B, if A)

P2. A

C. B

P1. If I have the cold, then I am sick.

P2. I have the cold.

C. I am sick.

P1. If we ought to save the drowning child, Taylor Swift is a philosopher.

P2. We ought to save the drowning child.

C. Therefore, Taylor Swift is a philosopher.

Valid or invalid?

Always valid argument form 2

P1. If A, then B (= B, if A)

P2. **Not B**

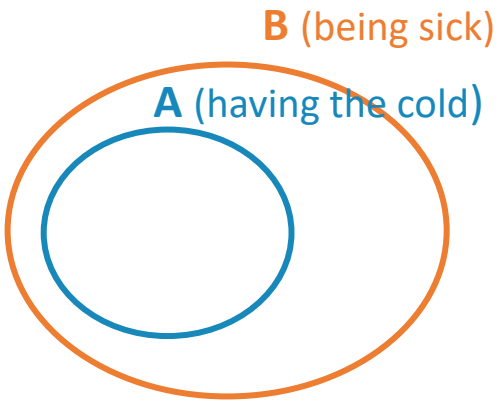
C. **Not A**

P1. If I have the cold, then I am sick.

P2. I am **not** sick.

C. I do **not** have the cold.

Always valid argument form 2



P1. If A, then B (= B, if A)

P2. **Not B**

C. **Not A**

P1. If I have the cold, then I am sick.

P2. I am **not** sick.

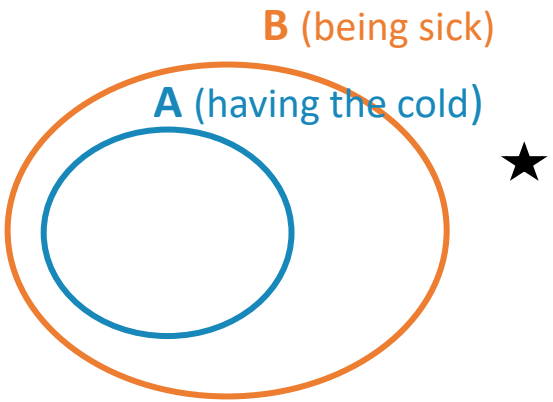
C. I do **not** have the cold.

Always valid argument form 2

P1. If A, then B (= B, if A)

P2. **Not B**

C. **Not A**

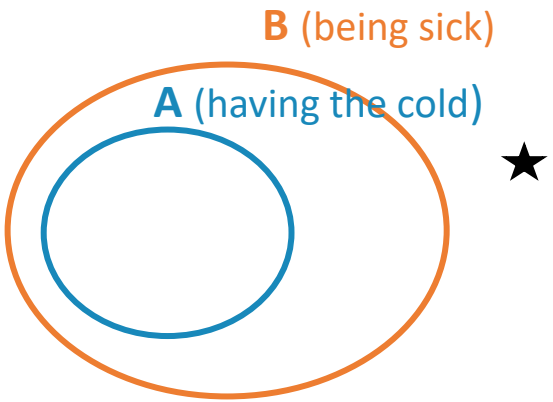


P1. If I have the cold, then I am sick.

P2. I am **not** sick.

C. I do **not** have the cold.

Always valid argument form 2



P1. If A, then B (= B, if A)

P2. **Not B**

C. **Not A**

P1. If I have the cold, then I am sick.

P2. I am **not** sick.

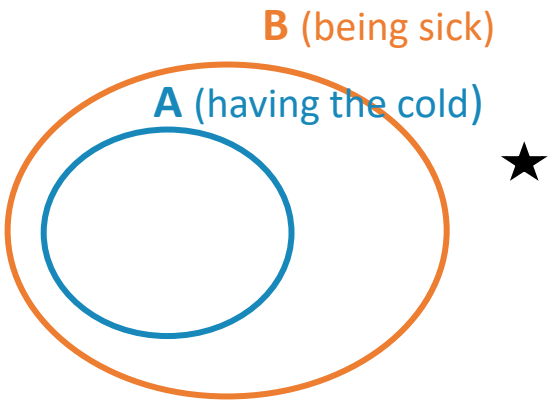
C. I do **not** have the cold.

Always valid argument form 2

P1. If A, then B (= B, if A)

P2. **Not B**

C. **Not A**



P1. If I have the cold, then I am sick.

P2. I am **not** sick.

C. I do **not** have the cold.

P1.If alien life existed, then we would have encountered it.

P2. We have **not** encountered it.

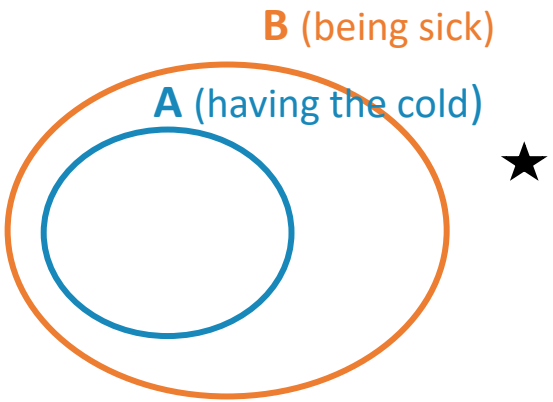
C. Alien life does **not** exist.

Always valid argument form 2

P1. If A, then B (= B, if A)

P2. **Not B**

C. **Not A**



P1. If I have the cold, then I am sick.

P2. I am **not** sick.

C. I do **not** have the cold.

P1. If throwing the switch is permissible in Bystander, durian is delicious.

P2. Durian is **not** delicious.

C. Throwing the switch is **not** permissible in Bystander.

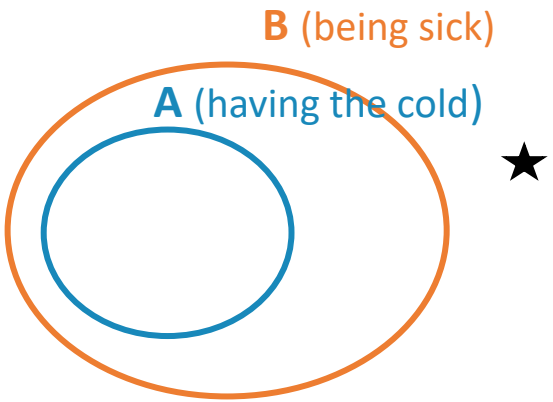
Valid or invalid?

Always valid argument form 2

P1. If A, then B (= B, if A)

P2. **Not B**

C. **Not A**



P1. If I have the cold, then I am sick.

P2. I am **not** sick.

C. I do **not** have the cold.

P1. If throwing the switch is permissible in Bystander, durian is delicious.

P2. Durian is **not** delicious.

C. Throwing the switch is **not** permissible in Bystander.

Valid or invalid?

Next, two common **invalid** argument forms

Always invalid argument form 1

P1. If A, then B (= B, if A)

P2. **Not A**

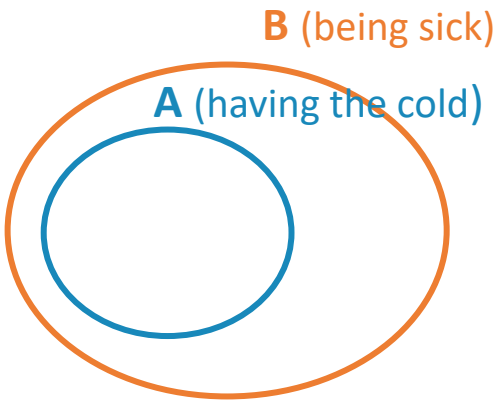
C. **Not B**

P1. If I have the cold, then I am sick.

P2. I do **not** have the cold

C. I am **not** sick.

Always invalid argument form 1



P1. If A, then B (= B, if A)

P2. **Not A**

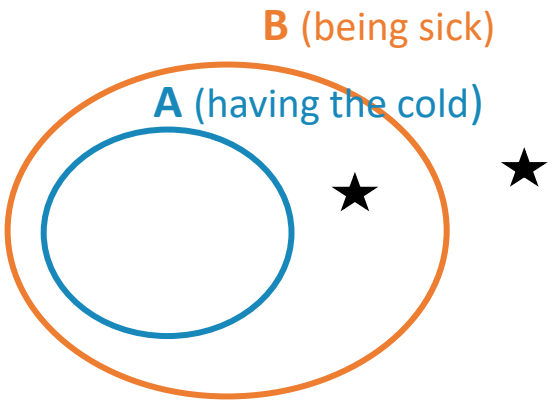
C. **Not B**

P1. If I have the cold, then I am sick.

P2. I do **not** have the cold

C. I am **not** sick.

Always invalid argument form 1



P1. If A, then B (= B, if A)

P2. **Not A**

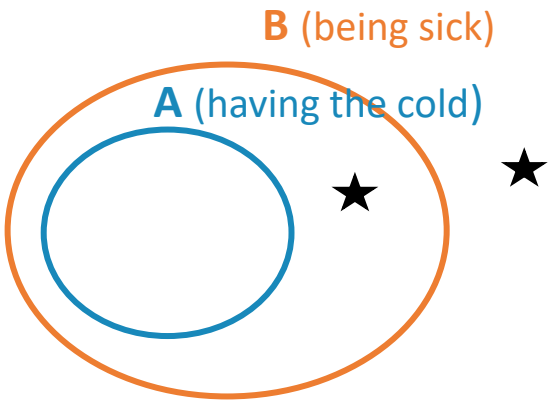
C. **Not B**

P1. If I have the cold, then I am sick.

P2. I do **not** have the cold

C. I am **not** sick.

Always invalid argument form 1



P1. If A, then B (= B, if A)

P2. **Not A**

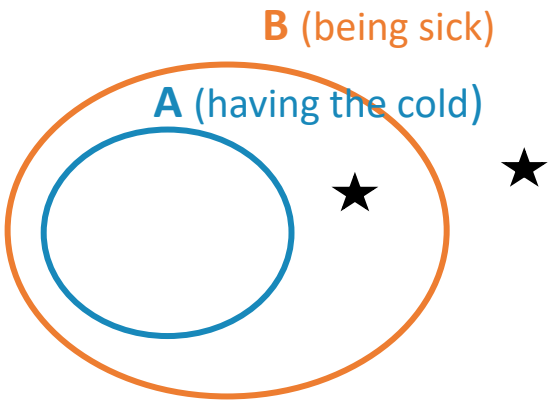
C. **Not B**

P1. If I have the cold, then I am sick.

P2. I do **not** have the cold

C. I am **not** sick.

Always invalid argument form 1



P1. If A, then B (= B, if A)

P2. **Not A**

C. **Not B**

P1. If I have the cold, then I am sick.

P2. I do **not** have the cold

C. I am **not** sick.

- A **sound** argument is a **valid** argument whose **premises are all true.**

  Soundness = (1) validity + (2) all premises being true.

  Both conditions need to be met for an argument to be sound.

- A **valid** argument:

  Its premises and conclusion are connected in such a way that…

  if the premises are all true, the conclusion must be true as well.

  In other words, the conclusion follows from the premises.

  The premises, if all true, 100% guarantee the truth of the conclusion.

  (It doesn't matter whether the premises are actually true.)

  How to check whether an argument is valid:

  Assume that all the premises are true and think about whether it is possible for the conclusion to be false.

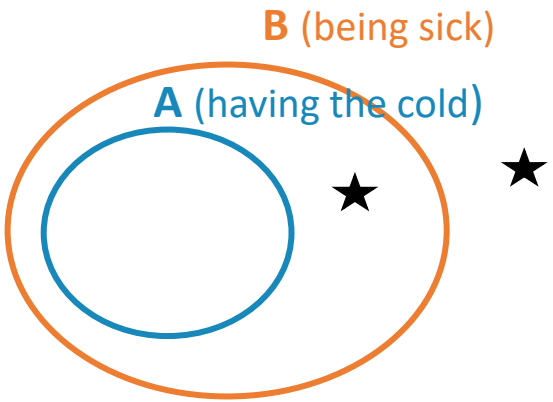
  If yes, invalid. If no, valid.

E.g.) P1. All philosophers are men.

P2. Jungkook is a philosopher. Sound or unsound?

C. Jungkook is a man.

Always invalid argument form 1



P1. If A, then B (= B, if A)

P2. **Not A**

C. **Not B**

P1. If I have the cold, then I am sick.

P2. I do **not** have the cold

C. I am **not** sick.

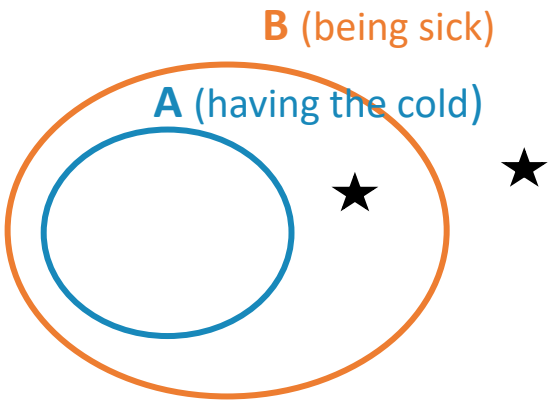
P1. If Edward Cullen were a human, he would be mortal.

P2. Edward Cullen is **not** a human.

C. Edward Cullen is **not** mortal.

Valid or invalid?

Always invalid argument form 1



P1. If A, then B (= B, if A)

P2. **Not A**

C. **Not B**

P1. If I have the cold, then I am sick.

P2. I do **not** have the cold

C. I am **not** sick.

P1. If Edward Cullen were a human, he would be mortal.

P2. Edward Cullen is **not** a human.

C. Edward Cullen is **not** mortal.

Invalid

Valid or invalid?

Always invalid argument form 2

P1. If A, then B (= B, if A)

P2. **B**

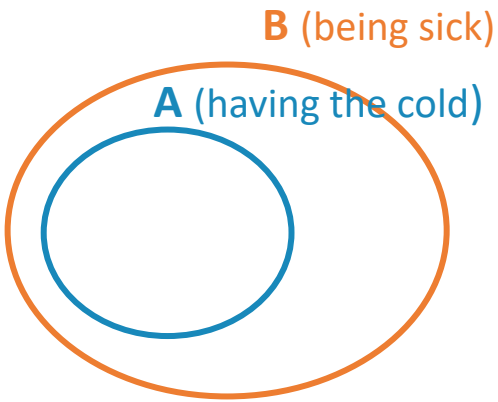
C. **A**

P1. If I have the cold, then I am sick.

P2. I am sick.

C. I have the cold.

Always invalid argument form 2



P1. If A, then B (= B, if A)

P2. **B**

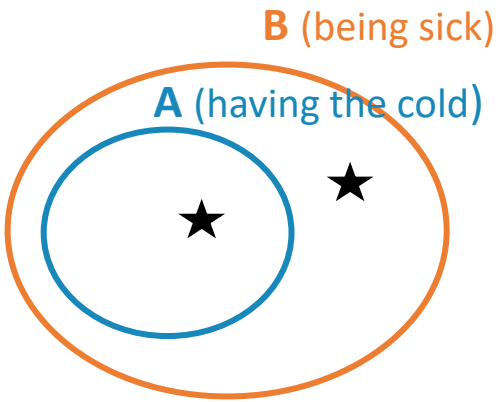
C. **A**

P1. If I have the cold, then I am sick.

P2. I am sick.

C. I have the cold.

Always invalid argument form 2



P1. If A, then B (= B, if A)

P2. **B**

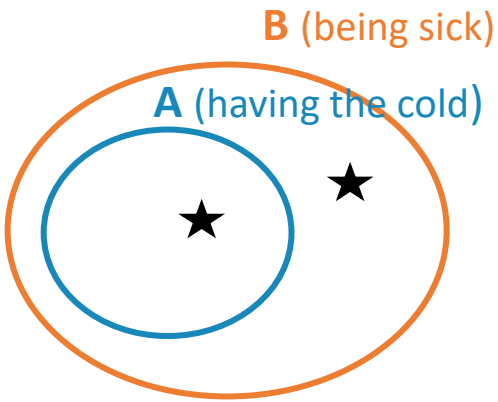
C. **A**

P1. If I have the cold, then I am sick.

P2. I am sick.

C. I have the cold.

Always invalid argument form 2



P1. If A, then B (= B, if A)

P2. **B**

C. **A**

P1. If I have the cold, then I am sick.

P2. I am sick.

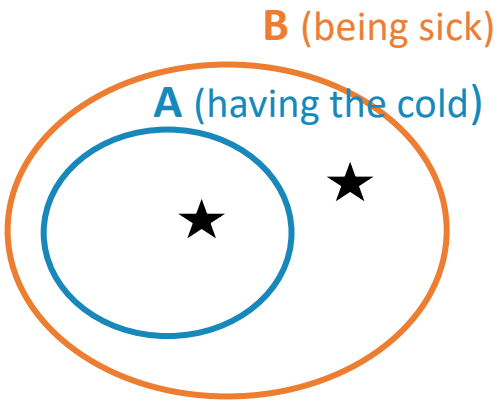
C. I have the cold.

Always invalid argument form 2

P1. If A, then B (= B, if A)

P2. **B**

C. **A**



P1. If I have the cold, then I am sick.

P2. I am sick.

C. I have the cold.

- A **sound** argument is a **valid** argument whose **premises are all true.**

  Soundness = (1) validity + (2) all premises being true.

  Both conditions need to be met for an argument to be sound.

- A **valid** argument:

  Its premises and conclusion are connected in such a way that…

  if the premises are all true, the conclusion must be true as well.

  In other words, the conclusion follows from the premises.

  The premises, if all true, 100% guarantee the truth of the conclusion.

  (It doesn't matter whether the premises are actually true.)

  How to check whether an argument is valid:

  Assume that all the premises are true and think about whether it is possible for the conclusion to be false.

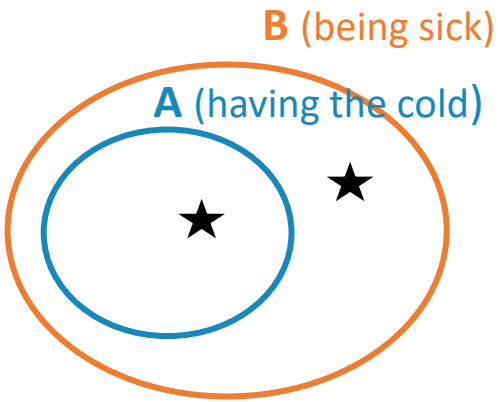
  If yes, invalid. If no, valid.

E.g.) P1. All philosophers are men.

P2. Jungkook is a philosopher. Sound or unsound?

C. Jungkook is a man.

Always invalid argument form 2



P1. If A, then B (= B, if A)

P2. **B**

C. **A**

P1. If I have the cold, then I am sick.

P2. I am sick.

C. I have the cold.

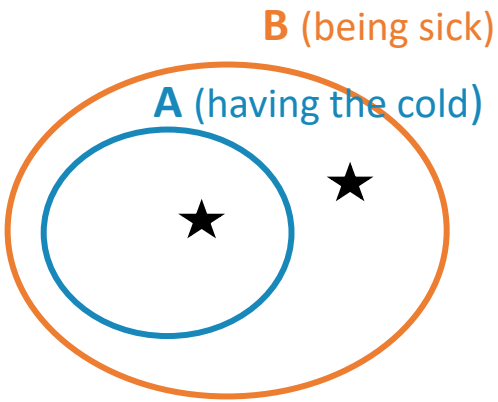
P1. If Edward Cullen is a vampire, he is immortal.

P2. Edward Cullen is immortal.

C. Edward Cullen is a vampire.

Valid or invalid?

Always invalid argument form 2



P1. If A, then B (= B, if A)

P2. **B**

C. **A**

P1. If I have the cold, then I am sick.

P2. I am sick.

C. I have the cold.

P1. If Edward Cullen is a vampire, he is immortal. True

P2. Edward Cullen is immortal. True

C. Edward Cullen is a vampire. True

Valid or invalid?

Invalid

No need to memorise the grey parts

(1) Always valid Modus Ponens (affirming the antecedent)

If A, then B
A.
Therefore, B.

(2) Always valid Modus Tollens (denying the consequent)

If A, then B
Not B.
Therefore, Not A.

(3) Always invalid

If A, then B
Not A.
Therefore, Not B.

(4) Always invalid

If A, then B
B.
Therefore, A.

If A, then B
A: antecedent
B: consequent

Let’s practice!

P1. If the death penalty deters crime, it is justified.

P2. The death penalty does not deter crime.

C. Therefore, the death penalty is not justified.

Valid or invalid?

P1. If the death penalty deters crime, it is justified.

P2. The death penalty does not deter crime.

C. Therefore, the death penalty is not justified.

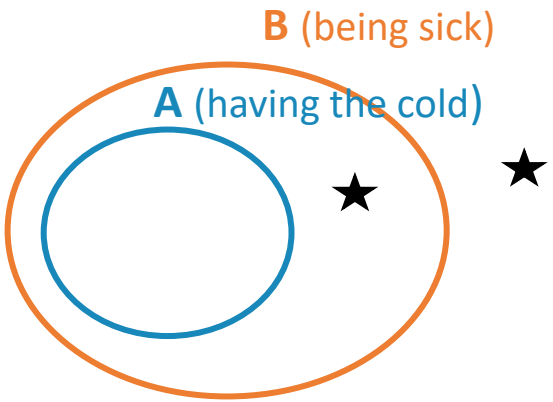
invalid

Always invalid argument form 1

P1. If A, then B (= B, if A)

P2. **Not A**

C. **Not B**



P1. If I have the cold, then I am sick.

P2. I do **not** have the cold

C. I am **not** sick.

P1. If my crush is interested in me, they will text me.

P2. My crush just texted me.

C. My crush is interested in me.

Valid or invalid?

P1. If my crush is interested in me, they will text me.

P2. My crush just texted me.

C. My crush is interested in me.

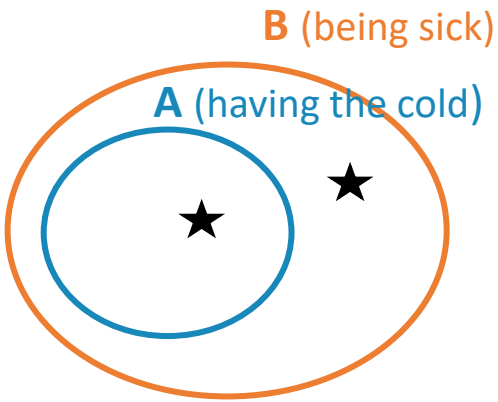
Invalid

Always invalid argument form 2

P1. If A, then B (= B, if A)

P2. B

C. A



P1. If I have the cold, then I am sick.

P2. I am sick.

C. I have the cold.

P1. If my crush is interested in me, they will text me.

P2. My crush just texted me.

C. My crush is interested in me.

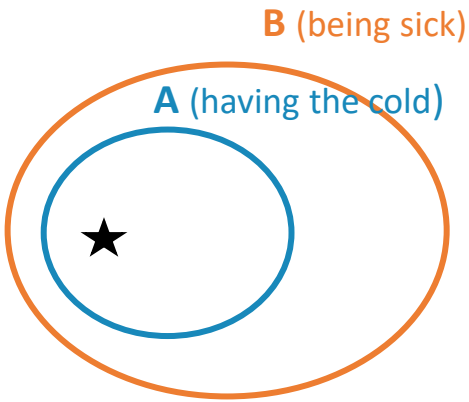
Invalid

Does this mean that the conclusion is false?

No. It just means this particular argument fails to show that the conclusion is true.

There might be other, good arguments that show that the conclusion is true.

Always valid argument form 1



P1. If A, then B (= B, if A)

P2. A

C. B

P1. If I have the cold, then I am sick.

P2. I have the cold.

C. I am sick.

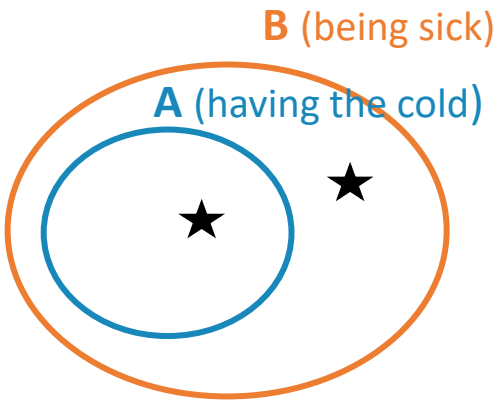
P1. If your crush blushes when they see you, they are interested in you.

P2. Your crush blushes when they see you.

C. Therefore, they are interested in you.

Valid!
If the premises are true, it must be the case that my crush is interested in me!

Always invalid argument form 2



P1. If A, then B (= B, if A)

P2. **B**

C. **A**

P1. If I have the cold, then I am sick.

P2. I am sick.

C. I have the cold.

P1. If Edward Cullen is a vampire, he is immortal. True

P2. Edward Cullen is immortal. True

C. Edward Cullen is a vampire. True

Valid or invalid?

Invalid

P1. If my crush is interested in me, they will text me.

P2. My crush never texts me.

C. My crush is not interested in me.

Valid or invalid?

P1. If my crush is interested in me, they will text me.

P2. My crush never texts me.

C. My crush is not interested in me.

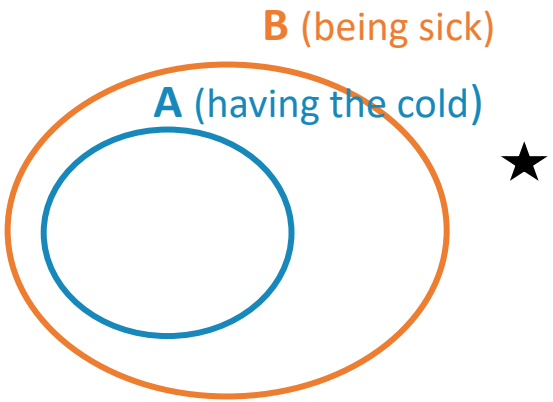
Valid

Always valid argument form 2

P1. If A, then B (= B, if A)

P2. **Not B**

C. **Not A**



P1. If I have the cold, then I am sick.

P2. I am **not** sick.

C. I do **not** have the cold.

P1. If my crush is interested in me, they will text me.

P2. My crush never texts me.

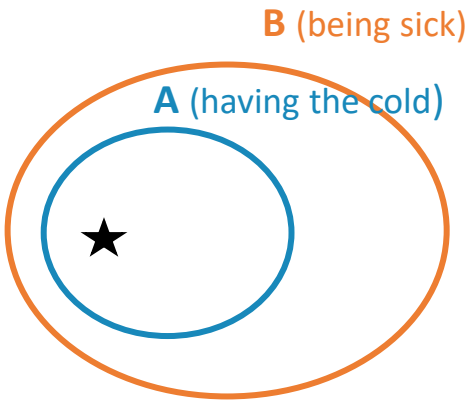
C. My crush is not interested in me.

Valid

Does this mean that I must accept that the conclusion (that is, the conclusion is true)?

No, because the argument might not be sound. For example, P1 might be false.

Always valid argument form 1



P1. If A, then B (= B, if A)

P2. A

C. B

P1. If I have the cold, then I am sick.

P2. I have the cold.

C. I am sick.

P1. If we ought to save the drowning child, Taylor Swift is a philosopher.

P2. We ought to save the drowning child.

C. Therefore, Taylor Swift is a philosopher.

Valid or invalid?

P1. If my crush is interested in me, they will text me.

P2. My crush never texts me.

C. My crush is not interested in me.

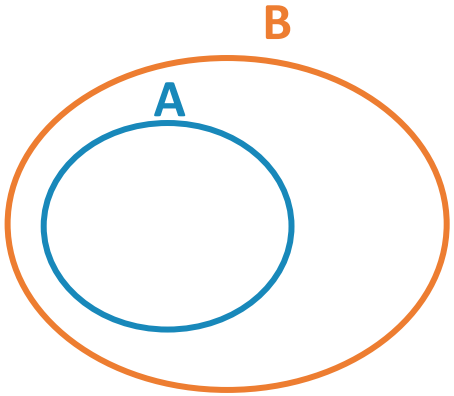
Valid

Does this mean that I must accept that the conclusion (that is, the conclusion is true)?

No, because the argument might not be sound.
For example, P1 might be false.

How do we know whether "**if A, then B**" is true or false?

"**if A, then B**" means, roughly, that whenever A is true, B is always true.



So, if it is possible that A is true but B is false, "**if A, then B**" is false.

Why are we learning these things?

These things can help you when you evaluate or construct an argument

James Rachels, “The Challenge of Cultural Relativism” (1986)

James Rachels
(1941-2003)

Cultural relativism is false!

What makes an action morally right or wrong?

Are there objective truths about morality?

Cultural relativism

- Cultural relativism:

  The truth of moral judgments is relative to a culture or society.

  The moral code of a society determines what is right or wrong within that society.

  "It says, in effect, that there is no such thing as universal truth in ethics; there are only the various cultural codes, and nothing more. Moreover, our own code has no special status; it is merely one among many." (p.14)

Roughly, the moral rules that members of the society follow and *believe* to be true

- According to cultural relativism, moral judgments such as "You should not kill your baby" are similar to judgements like "You should drive on the left side of the road" or "India is to the west". These are true in Singapore but false in some other places, and there is no objective or universal truth about whether you should drive on the left side of the road or whether India is to the west.

Why accept cultural relativism?

Different cultures have different moral codes. For example…

- "Callatians (a tribe of Indians) customarily ate the bodies of their dead fathers. The Greeks, of course, did not do that –the Greeks practiced cremation" (p.12)

- "Eskimo customs turned out to be very different from our own. The men often had more than one wife, and they would share their wives with guests, lending them for the night as a sign of hospitality." (p. 13)

- The Eskimos also seemed to have less regard for human life. Infanticide, for example, was common….Female babies…were especially liable to be destroyed, and this was permitted simply at the parents' discretion, with no social stigma attached to it. Old people also, when they became too feeble to contribute to the family, were left out in the snow to die." (p. 13)

- Which animals to eat, polygamy, etc.

James Rachels
(1941-2003)

Still, cultural relativism is false!

Why cultural relativism is false, according to Rachels

- Rachels first criticizes a common argument for cultural relativism, which goes as follows.

P1. Different cultures have different moral codes

C. Cultural relativism is true.

(That is, “there is no objective "truth" in morality. Right and wrong are only matters of opinion, and opinions vary from culture to culture.”) (p.16)

James Rachels
(1941-2003)

“**It is not sound. The trouble is that the conclusion does not really follow from the premise- that is, even if the premise is true, the conclusion still might be false.** The premise concerns what people *believe*: in some societies, people believe one thing; in other societies, people believe differently. The conclusion, however, concerns *what really is the case*. The trouble is that this sort of conclusion does not follow logically from this sort of premise… for it *could* be that the practice [of eating the dead] was objectively right (or wrong) and that one or the other of them was simply mistaken” (p.16)

- A **sound** argument is a **valid** argument whose **premises are all true.**

  Soundness = (1) validity + (2) all premises being true.

  Both conditions need to be met for an argument to be sound.

- A **valid** argument:

  Its premises and conclusion are connected in such a way that…

  if the premises are all true, the conclusion must be true as well.

  In other words, the conclusion follows from the premises.

  The premises, if all true, 100% guarantee the truth of the conclusion.

  (It doesn't matter whether the premises are actually true.)

  How to check whether an argument is valid:

  Assume that all the premises are true and think about whether it is possible for the conclusion to be false.

  If yes, invalid. If no, valid.

  E.g.) P1. All philosophers are men.

  P2. Jungkook is a philosopher. Sound or unsound?

  C. Jungkook is a man.

Unsound

Why cultural relativism is false, according to Rachels

- Rachels first criticizes a common argument for cultural relativism, which goes as follows.

P1. Different cultures have different moral codes

C. Cultural relativism is true.

(That is, “there is no objective "truth" in morality. Right and wrong are only matters of opinion, and opinions vary from culture to culture.”) (p.16)

James Rachels
(1941-2003)

“To make the point clearer, consider a very different matter. In some societies, people believe the earth is flat. In other societies, such as our own, people believe the earth is (roughly) spherical. Does it follow, *from the mere fact that they disagree,* that there is no "objective truth" in geography? Of course not; we would never draw such a conclusion because we realize that, in their beliefs about the world, the members of some societies might simply be wrong. There is no reason to think that if the world is round every one must know it. Similarly, there is no reason to think that if there is moral truth, everyone must know it.” (p. 16)

The existence of God, life after death, etc. might be better examples.

So far, Rachels has only shown that one particular argument for cultural relativism is unsuccessful.

This falls short of showing that cultural relativism is false.

So, he goes on to offer arguments that cultural relativism is false,

P1. If my crush is interested in me, they will text me.

P2. My crush just texted me.

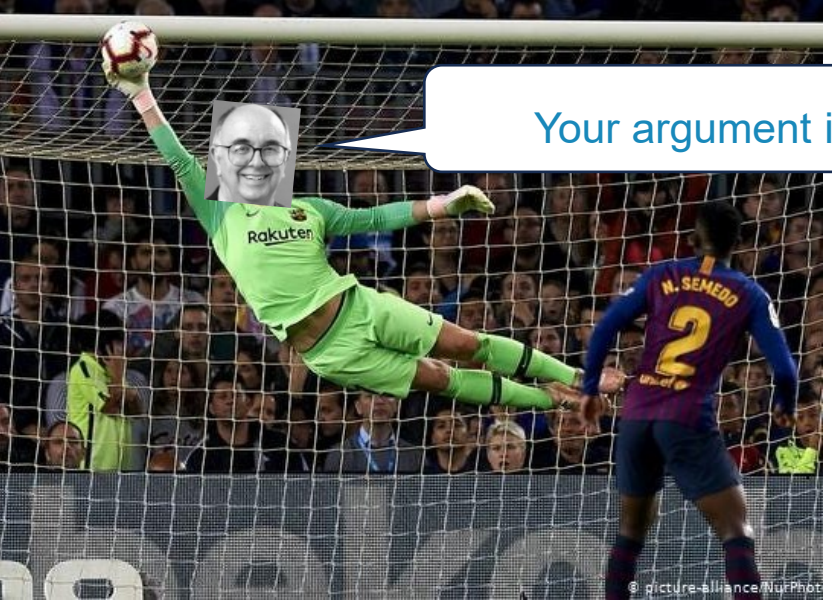
C. My crush is interested in me.

Invalid

Does this mean that the conclusion is false?

No. It just means this particular argument fails to show that the conclusion is true.

There might be other, good arguments that show that the conclusion is true.



Your argument is unsound!

Here goes my argument!
10
10

So far, Rachels has only shown that one particular argument for cultural relativism is unsuccessful.

This falls short of showing that cultural relativism is false.

So, he goes on to offer arguments that cultural relativism is false, which all use the always valid argument form 2 discussed earlier.

(1) Always valid

If A, then B
A.
Therefore, B.

(2) Always valid

If A, then B
Not B.
Therefore, Not A.

(3) Always invalid

If A, then B
Not A.
Therefore, Not B.

(4) Always invalid

If A, then B
B.
Therefore, A.

Why cultural relativism is false, according to Rachels

- Rachels' arguments that cultural relativism is false have the following structure.

P1. If cultural relativism is true, [insert a counterintuitive implication of cultural relativism].

P2. It is **not the case** that [ ].

C. Therefore, cultural relativism is **not** true.

- He mentions three such implications/consequences.

1. The customs of other societies are never morally inferior to our own.

James Rachels
(1941-2003)

"This, of course, is one of the main points stressed by Cultural Relativism. We would have to stop condemning other societies merely because they are "different." So long as we concentrate on certain examples, such as the funerary practices of the Greeks and Callatians, this may seem to be a sophisticated, enlightened attitude" (p.17)

Why cultural relativism is false, according to Rachels

- Rachels' arguments that cultural relativism is false have the following structure.

P1. If cultural relativism is true, [insert a counterintuitive implication of cultural relativism].

P2. It is **not the case** that [ ].

C. Therefore, cultural relativism is **not** true.

- He mentions three such implications/consequences.

1. The customs of other societies are never morally inferior to our own.

James Rachels
(1941-2003)

"However, we would also be stopped from criticizing other, less benign practices. Suppose a society waged war on its neighbors for the purpose of taking slaves. Or suppose a society was violently anti-Semitic and its leaders set out to destroy the Jews. Cultural Relativism would preclude us from saying that either of these practices was wrong. We would not even be able to say that a society tolerant of Jews is *better* than the anti-Semitic society, for that would imply some sort of transcultural standard of comparison." (p.17)

Why cultural relativism is false, according to Rachels

- Rachels' arguments that cultural relativism is false have the following structure.

P1. If cultural relativism is true, [insert a counterintuitive implication of cultural relativism].

P2. It is **not the case** that [ ].

C. Therefore, cultural relativism is **not** true.

- He mentions three such implications/consequences.

2. We could decide whether actions are right or wrong just by consulting the standards of our society.

James Rachels
(1941-2003)

"Cultural Relativism suggests a simple test for determining what is right and what is wrong: all one has to do is ask whether the action is in accordance with the code of one's society. Suppose a resident of South Africa is wondering whether his country's policy of *apartheid*- rigid racial segregation - is morally correct. All he has to do is ask whether this policy conforms to his society's moral code." (p.18)

Why cultural relativism is false, according to Rachels

- Rachels' arguments that cultural relativism is false have the following structure.

P1. If cultural relativism is true, [insert a counterintuitive implication of cultural relativism].

P2. It is **not the case** that [ ].

C. Therefore, cultural relativism is **not** true.

- He mentions three such implications/consequences.

2. We could decide whether actions are right or wrong just by consulting the standards of our society.

James Rachels
(1941-2003)

"This implication of Cultural Relativism is disturbing because few of us think that our society's code is perfect-we can think of ways it might be improved. Yet Cultural Relativism would not only forbid us from criticizing the codes of other societies; it would stop us from criticizing our own." (p.18)

Why cultural relativism is false, according to Rachels

- Rachels' arguments that cultural relativism is false have the following structure.

P1. If cultural relativism is true, [insert a counterintuitive implication of cultural relativism].

P2. It is **not the case** that [ ].

C. Therefore, cultural relativism is **not** true.

- He mentions three such implications/consequences.

3. Moral progress is impossible.

James Rachels
(1941-2003)

"Usually, we think that at least some changes in our society have been for the better…Consider this example: Throughout most of Western history the place of women in society was very narrowly circumscribed. They could not own property; they could not vote or hold political office; with a few exceptions, they were not permitted to have paying jobs; and generally they were under the almost absolute control of their husbands. Recently much of this has changed, and most people think of it as progress." (p.18)

Why cultural relativism is false, according to Rachels

- Rachels' arguments that cultural relativism is false have the following structure.

P1. If cultural relativism is true, [insert a counterintuitive implication of cultural relativism].

P2. It is **not the case** that [ ].

C. Therefore, cultural relativism is **not** true.

- He mentions three such implications/consequences.

3. Moral progress is impossible.

James Rachels
(1941-2003)

"But by what standard do we judge the new ways as better? If the old ways were in accordance with the social standards of their time, then Cultural Relativism would say it is a mistake to judge them by the standards of a different time. Eighteenth-century society was, in effect, a different society from the one we have now. To say that we have made progress implies a judgment that present-day society is better, and that is just the sort of transcultural judgment that, according to Cultural Relativism, is impermissible" (p.18)

Why cultural relativism is false, according to Rachels

- Rachels' arguments that cultural relativism is false have the following structure.

P1. If cultural relativism is true, [insert a counterintuitive implication of cultural relativism].

P2. It is **not the case** that [ ].

C. Therefore, cultural relativism is **not** true.

- He mentions three such implications/consequences.

1. The customs of other societies are never morally inferior to our own.
2. We could decide whether actions are right or wrong just by consulting the standards of our society.
3. Moral progress is impossible.

- (Rachels doesn't directly mention this but) another interesting consequence of cultural relativism:

  It may not be true (at least in some cultures) that we ought to be tolerant of other cultures.

What could cultural relativists say in response to Rachels' arguments?

cultural relativist

What could cultural relativists say in response?

Rachels' arguments are valid
(and if they are also sound, cultural relativists must accept the conclusion).

So, cultural relativists only have one option—attack the premises.

A sound argument is a good argument because..

if an argument is sound, its conclusion must be true.

- A **sound** argument is a **valid** argument whose **premises are all true.**

  Soundness = (1) validity + (2) all premises being true.

  Both conditions need to be met for an argument to be sound.

- A **valid** argument:

  Its premises and conclusion are connected in such a way that…

  if the premises are all true, the conclusion must be true as well.

  In other words, the conclusion follows from the premises.

  The premises, if all true, 100% guarantee the truth of the conclusion.

  (It doesn't matter whether the premises are actually true.)

  How to check whether an argument is valid:

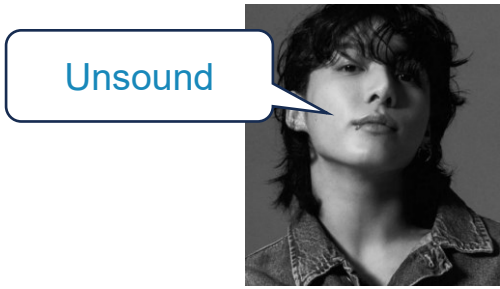
  Assume that all the premises are true and think about whether it is possible for the conclusion to be false.

  If yes, invalid. If no, valid.

  E.g.) P1. All philosophers are men.

  P2. Jungkook is a philosopher. Sound or unsound?

  C. Jungkook is a man.



Possible responses to Rachels' arguments from cultural relativists

- Rachels' arguments that cultural relativism is false have the following structure.

P1. If cultural relativism is true, [insert a counterintuitive implication of cultural relativism].

~~P2. It is **not the case** that [ ].~~

C. Therefore, cultural relativism is **not** true.

- He mentions three such implications/consequences.

1. The customs of other societies are never morally inferior to our own.
2. We could decide whether actions are right or wrong just by consulting the standards of our society.
3. Moral progress is impossible.

First, cultural relativists might deny P2, accepting the allegedly counterintuitive implications of cultural relativism.

[Side note] In philosophy, when, in response to the objection that their view has a counterintuitive implication, a philosopher just accepts the implication, they are "**biting the bullet**".

The phrase (as "bite on the bullet") was first recorded by Rudyard Kipling in his 1891 novel The Light that Failed. It has been suggested that it is derived historically from the practice of having a patient clench a bullet in their teeth as a way to cope with the pain of a surgical procedure without anesthetic.

Possible responses to Rachels' arguments from cultural relativists

- Rachels' arguments that cultural relativism is false have the following structure.

~~P1. If cultural relativism is true, [insert a counterintuitive implication of cultural relativism].~~

P2. It is **not the case** that [ ].

C. Therefore, cultural relativism is **not** true.

- He mentions three such implications/consequences.

1. The customs of other societies are never morally inferior to our own.
2. We could decide whether actions are right or wrong just by consulting the standards of our society.
3. Moral progress is impossible.

Second, cultural relativists might deny P1, by distinguishing between a society's common practices and **ideals (fundamental standards)** and claiming that only the latter determines what is right or wrong in the society. Since members of a society may not know the society's ideals or may fail to live up to them, even on cultural relativism, one society can be morally inferior to another (if the first fails to live up to its own ideals), one cannot necessarily decide whether actions are right or wrong just by consulting the standards of our society (because these standards might not be the ideals), and moral progress is possible in some sense.

James Rachels
(1941-2003)

"A reformer such as Martin Luther King, Jr., seeks to change his society for the better. Within the constraints imposed by Cultural Relativism, there is one way this might be done. If a society is not living up to its own ideals, the reformer may be regarded as acting for the best: the ideals of the society are the standard by which we judge his or her proposals as worthwhile. But the "reformer" may not challenge the ideals themselves, for those ideals are by definition correct. According to Cultural Relativism, then, the idea of social reform makes sense only in this very limited way." (pp.18-9)

Is this limited sense satisfactory?

For example, is the reason Nazi Germany is morally inferior to other societies really that they failed to live up to their own moral ideals? What if Nazism was their own moral ideal?

What we can learn from cultural relativism, according to Rachels.

What we can learn from cultural relativism

According to Rachels, although cultural relativism is false, we can learn something from it.

James Rachels
(1941-2003)

"Cultural Relativism warns us, quite rightly, about the danger of assuming that all our preferences are based on some absolute rational standard. They are not. Many (but not all) of our practices are merely peculiar to our society…Funerary practices are one example…There are many other matters that we tend to think of in terms of objective right and wrong, but that are really nothing more than social conventions. Should women cover their breasts? A publicly exposed breast is scandalous in our society, whereas in other cultures it is unremarkable. Objectively speaking, it is neither right nor wrong-there is no objective reason why either custom is better. Cultural Relativism begins with the valuable insight that many of our practices are like this-they are only cultural products. Then it goes wrong by concluding that, because some practices are like this, all must be." (p.23)

James Rachels
(1941-2003)

There *are* universal moral norms.

e.g.) You should value the life of an infant.

What about the Eskimos?

James Rachels
(1941-2003)

"An Eskimo family will always protect its babies if conditions permit. But they live in a harsh environment, where food is often in short supply…A family may want to nourish its babies but be unable to do so…Moreover, the Eskimos are a nomadic people -unable to farm, they must move about in search of food. Infants must be carried, and a mother can carry only one baby in her parka…Infant girls are more readily disposed of because, first, in this society the males are the primary food providers -they are the hunters…The Eskimos' values are not all that different from our values. It is only that life forces upon them choices that we do not have to make" (pp.20-21)

As usual, I'll leave it up to you to think about

whether Rachels has successfully shown that cultural relativism is false.

What to do this week
